

Diclofenac potassium immediate release orally/oral dispersible tablets (ODT) and orally/oral dispersible powder (ODP) (25mg)

Diclofenac (25mg) oral dispersible tablets (ODT) and oral dispersible powder (ODP) represent a major step forward in the OTC analgesic market, with unique characteristics:

- Fast-dissolving, pleasant to take formulations with immediate dissolution in the mouth, without the need of water/liquid
- Rapid absorption ensures prompt onset of analgesic action
- Dosages of 25mg target OTC indications
- Represent an excellent line extension for acute pain products

Products do not need to be taken with water/liquid, which may cause of nausea/discomfort during an attack of acute pain - means that patient compliance is improved.
