

## Insect repellent patch

New patch formulation provides **protection** from **insects** without the need to apply product directly on the skin. Unique blend of **natural oils** release their characteristic smell that repels mosquitos and other bothersome insects. The non-staining disposable patch could be attached to clothes, preferably near the areas to be protected, and the natural body temperature causes the release of essential oils.

Suitable for children of 2 years and over.

### Safety criteria and Experimental Evidences
