

Corporate fact sheet

About APR Applied Pharma Research s.a.

APR is a **Swiss, independent developer of science driven, patent protected Healthcare products.**

APR is focused on the identification, development, approval and commercialization of added value, Rx, OTC, Medical Device and Nutritional products which can provide differentiation through improved efficacy, safety or patient convenience (primarily thanks to their tailored and patented delivery systems and dosage forms) in the treatment of several diseases in different therapeutic areas on a global basis.

APR has a dedicated and experienced Research and Development team focused on innovation in healthcare and a strong formulation and development know how coupled with an extensive regulatory experience in US and EU.

In particular, APR is currently focused on 2 areas:

- internally developed and financed (alone or together with our co-development partners) proprietary, value added **products to be licensed** to healthcare companies for their commercialization
- support to third party projects by offering **added value R&D services** (for promotion, marketing and distribution) under contract and fee for service arrangements.

APR improves existing molecules through patented delivery systems or novel dosage forms in order to target new therapeutic indications or improve the efficacy/safety profile or patients compliance. The company has a global approach, targeting simultaneously **US, EU and China** during initial development and then extend products commercialization in as many countries as possible.

APR has a balanced pipeline of revenue generating branded products marketed in all major markets, combined with a compelling pipeline of innovative products at different stages of development, which span several therapeutical areas: migraine, cancer supportive care, pain management, wound care, inherited metabolic diseases, ocular surface diseases, baby healthcare and nutraceuticals.

APR SA provides a wide range of services for the pharmaceutical and pharmacological industry on a contract basis: Research and Development services with complete supervision, management and execution of the entire project, development of oral and topical formulation and drug delivery technologies (pharma, nutraceuticals, dermocosmetics, Medical Devices).

APR Applied Pharma Research SA has entered into licensing and healthcare partnership agreements with pharmaceutical companies in over 70 countries with international sales on a worldwide basis. Today their strategic focus is in **Europe**, the **United States of America (USA)** and **fast growing markets** such as China, Russia and Latin America.
